A horse, a rider, Stübben

Where tradition meets modernity

Stübben has been connecting riders and horses all over the world since 1894. From the heart of Europe, the fifth-generation family-owned business develops products that set new standards. We offer high-quality materials that aid high-quality sports performance. We are convinced that the well-being of the horse AND the rider is the basic prerequisite for this ideology. Thereby, our regularly patented innovations are based on the principle of supporting the bio-mechanics of the horse and rider partnership.

Our company is full of passionate people, who try every day to do their best in the field of saddlery, saddle fitting, design, logistics, marketing... Our love for horses unites us and motivates us to always commit ourselves and make our motto a reality:

"We commit to innovation and service excellence so that the well-being of your horse is the foundation for you to build a true partnership and do what seemed impossible"

Dressage saddles

Euphoria

3 300

Seat sizes:

17,0" - 17,5" - 18,0"

Tree widths:

27 cm - 28 cm - 29 cm - 30 cm - 31 cm - 32 cm - XW

Colours:

From €3.940,00 / £3,590.00

Features:

- special deep seat
- V-webbing
- ready for point billet
- NT saddle tree with narrow twist

Included:

- gusset panels
- long billets

Options:

- | | |
|--|-------------------|
| • configuration BIOMEX | €270,00 / £245.00 |
| • de Luxe version | €320,00 / £290.00 |
| • reinforcement strip (only possible with de luxe version) | €90,00 / £81.00 |
| • cantle overlay with MT + standard inlay | €250,00 / £225.00 |
| • Stübben Styles | €250,00 / £225.00 |
| • Stübben Custom | €350,00 / £315.00 |
| • TreeClix Basis | €200,00 / £180.00 |

Centurion II

3 321

Seat sizes:

16,5" - 17,0" - 17,5" - 18,0"

Tree widths:

27 cm - 28 cm - 29 cm - 30 cm - 31 cm - 32 cm - XW

Colours:

From €5.200,00 / £4,730.00

Features:

- Close Contact mono-flap
- the innovative external block can quickly be adjusted for a perfect leg position without the need for any tools. This feature is also ideal if multiple riders are using the same saddle
- narrow twist saddle tree and extra deep seat with plenty of freedom of movement and closeness to the horse

Included:

- "Stübben" written with 3D effect letters in the gullet channel
- long billets
- additional soft padding creates a flowing transition between the flap and block which comfortably embeds the knee

Options:

- | | |
|---|-------------------|
| • cantle overlay with MT + standard inlay | €250,00 / £225.00 |
| • gullet channel can be personalized with 3D effect letters (e.g. horse's name) | €150,00 / £140.00 |
| • Stübben Styles | €250,00 / £225.00 |
| • Stübben Custom | €350,00 / £315.00 |
| • TreeClix Basis | €200,00 / £180.00 |

Centurion II

The Centurion II ushers in a new era of mono flap saddles

With conventional mono-flap saddles, as with the predecessor model Centurion I, it is not possible to individually adjust the exterior blocks to the rider. This problem no longer exists. The completely redesigned blocks can be adjusted to the rider's desired position in just a few simple steps. The blocks can be adjusted to different people very easily, even with the rider in the saddle.

The clou

Neither optics nor stability are negatively affected. Classic dressage can be perfectly combined with the modern dressage horse type. The Centurion II offers you enough space to find your own centre of gravity and equally supports you when your horse makes big, sweeping movements.

Close Contact redefined

Being close to your horse has been redefined in this saddle. The wide seat in the area of the ischial tuberosities and the deep seat allows you to feel your horse's movement while giving you the chance to precisely give aids. The mono flap moulds around the ribcage when girthed and additionally reinforces the close contact to your horse. An additional reinforcement below the gullet plate prevents pressure points and improves the distribution of the rider's weight. The wide contact surface also offers the horse a high level of comfort and with the help of many different panel shapes, tree adjustments and much more, a custom solution can be found for almost every horse. The Centurion II offers many configuration possibilities in terms of both, custom fit and design.

Brand new

For the first time, the gullet leather between the panels can be individualized. The Stübben styles and custom options make this saddle a beauty, second to none.

Aramis II

3 292

REV saddle

The saddle REvolution - Stübben x Martin Ryan

The new saddle REvolution from Stübben in collaboration with the award-winning innovator Martin Ryan offers ultimate comfort for both horse and rider, unique modular system supports interchangeable saddle flaps and an unbeatable fit across a wide range of wither profiles with just one saddle.

The saddle tree innovation

The patented and award-winning saddle tree was developed to distribute the forces during riding as evenly as possible over a larger full-surface saddle area on the horse's back. The shock-absorbing action also reduces jerky and possibly uncontrolled movements. The "REVsport" is the perfect choice for riders with sporting ambitions. This fixed seat model is the further development of the REV standard seat and impresses with an even more intensive connection between rider and horse. The lateral support at the ischial tuberosities provides additional support and enables precise aids to be given. The clear lines and dynamic design emphasize the sporty orientation of this saddle.

Interchangeable saddle flaps

Whether longer trekking rides, jumping or dressage, this saddle allows you to combine the different equestrian disciplines in just one model. The saddle tree comes with a three-point girthing system, delivering a secure contact with the horse, as well as double stirrup bars that offer two leg positions, forward (jumping) or backward (dressage). The three different saddle flap variants in the forms trekking, jumping and dressage can be changed easily by means of a patented push button system. Similarly, the natural wool flocked panels can be removed and reattached in just a few simple steps.

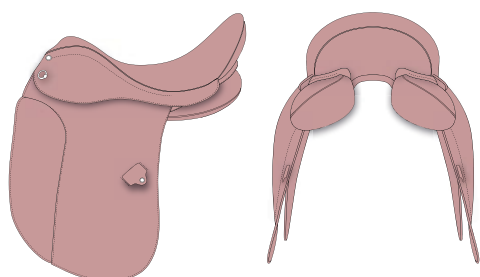

Adjustable chamber width

A special feature from the horse's point of view is the large bearing surface of the saddle tree on the horse's back. The design follows years of analysis ensuring the saddle fits a wide variety of horses. In contrast to classic saddle trees this saddle offers a continuous bearing surface on the horse's back from front to back. In exceptional cases, the saddle tree can be adapted to a narrow/high wither or a wide horse's back simply by screwing on chamber width wedges for a better fit.

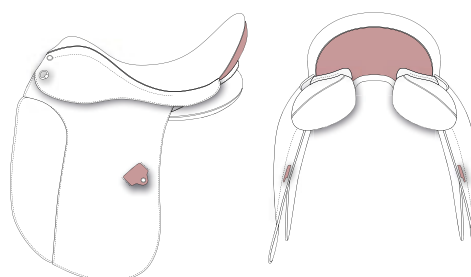

Stübben Custom

It's in the details

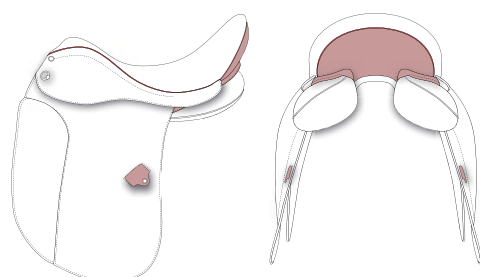

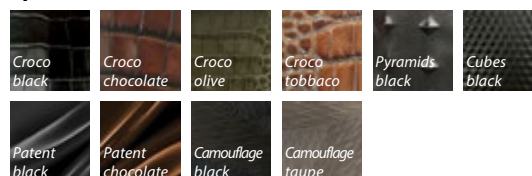

Our customization options are almost endless! Show your true colours and create your very own combination for a unique saddle. From the base colour to the cantle, from the stitching to the metal fittings, create the saddle of your dreams. All of our saddles can be fully customized. Book a fitting to find the perfect model for you and your horse and to create your custom saddle. The Stübben Custom option is also available on certain accessories.

Our leather

Our leather and materials selection

What makes us different is our complete dedication to quality. This is reflected in our choice of materials and through all steps of processing. Hence, the leather we use is eco-friendly to manufacture, lighter and durable for long-time use.

Full grain leather

Our material and supplier selections have always been of top quality and sustainability. The dominating material in our workshop is leather, and by far the most important resource. Selecting quality raw hides is the key. At Stübben we only process Central European full grain leather. The majority of our leather is from the "Simmentale" cow breed. In order to maintain the functionality of the hide, the top layer needs to be preserved. Only full grain leather features breathability, tensile strength and wear resistance. This is very important in Equestrian sports as the material is exposed to a high degree of wear and tear. Variations of weather, contact of sweat and abrasion can challenge the material. Because full grain leather is breathable it helps to reduce the

temperature which minimizes perspiration and aids in grip of the saddle. We ensure this with our specific tanning process where the pores of the leather are not sealed. Using all three layers of hide, the epidermis included, is what makes our leather strong and wear resistant.

Tanning process

The tanning process is what converts the raw-hide to leather. There are multiple tanning methods, with most falling into three categories, chrome tanning, vegetable tanning and metal free tanning. At Stübben, we process metal free tanned leather, which is hypo-allergenic and up to 25% lighter than chrome and vegetable tanned leather. It also has a smaller environmental footprint (Co2 production, water consumption and wasted water are reduced), a higher UV resiliency and is thermo neutral. With full confidence we can say that you will find no better leather product in the equestrian industry than Stübben. In addition with leather, most of our materials are being sourced and made in Europe. For example our saddle tree is made in France, our saddle nails are made in Italy and our foam and webbing are made in Germany.

The image displays four distinct shades of leather, each with a pebbled texture, arranged in a diagonal stack from top-right to bottom-left. The top-most swatch is a light, warm brown. Below it is a medium brown. The third swatch is a dark, rich brown. The bottom-most swatch is a very dark, almost black brown. Each swatch is labeled with its name in white, bold, sans-serif text.

Saddle fitting

Book a fitting

After requesting a fitting, we will put you in touch with our local retail partner and/or saddle fitter who will help you find the right model and evaluate the best possible fit for both horse and rider.

Fit & Balance - our custom approach

The ultimate goal of saddle fitting is to balance the saddle on the horse's back to evenly distribute the rider's weight and properly clear the horse's anatomy (withers, spine, shoulder, and rib cage), allowing for freedom of movement and for the rider to sit in an effortlessly balanced seat. How do we get to this point?

Example of the model Portos

7 tree width options, 4 seat sizes, 2 twist widths, 11 flap cuts, 8 panel flocking alterations = 4,928 possible variations. Thus, you can be sure that there is a solution for your specific requirements. To find these, we roughly outline the following:

Tree widths

The appropriate tree width is defined by an even pressure distribution over the entire surface of the saddle tree points with sufficient freedom for the wither.

Seat size

The right seat size is one of the few parameters that doesn't relate to the horse's anatomy. It is impossible to balance the saddle if the seat size is too small for the rider. The seat size is correct when the rider's seat bones are in the centre of gravity (lowest point in the saddle).

Panels

Our panel options along with different flocking variations enable the accommodation of diverse wither shapes as well as proper fit along the horse's spine. Again, the goal is to balance the saddle. To this end, we have developed customized solutions that take into account shoulder shape disparities, as well as rib cage circumference. By including these in our fit determination we help you achieve better performance from your horse.

**Scan me to
book a fitting!**

Our patented spring tree ensures that the rider's weight is only carried over the length of the tree. Our panels are at least as long as the tree and only as long as necessary. So the effective contact area (where pressure from the rider on the tree is transferred to the horse) is 42 cm maximum and 38 cm minimum.

Flaps

The flap cut is determined by the leg's anatomy and riding style preferences of the rider. Up to 11 different flap cuts are available depending on the saddle model. Regardless of cut, our panels and flaps are flexible around the area of the tree points in order to ensure the horse's freedom of movement.

Manufactured in Europe

Our saddles are produced individually for every customer and their horse. We manufacture all saddles and leather accessories in-house. The saddles come from our workshops in Germany, and our leather accessories from Spain. Most of our raw materials are of European origin. Production of your customized saddle normally takes 12-16 weeks. It will be delivered to you directly. After a further 6-8 weeks the saddle will be checked free of charge and flocking adjusted if necessary.

All the fitting options necessary to perfectly adapt the saddle to the horse and the rider are included in the price.

Saddles

Our saddle tree

Steel spring tree with elasticated webbing

Stübben saddles are built on the unique Stübben saddle tree. The tree is stretched by means of a special webbing whereby the tensile and compressive forces perfectly keep in balance, producing the ultimate spring tree. The result creates a comfortable sitting experience for the rider. The Stübben spring tree is the custom-made connection between rider and horse. The rider sits in the elastic webbing of the saddle tree, which flexes slightly under the riders' weight. When the weight is released the interior mounted steel springs bring the tree back to its original position. As a result the back of the horse is protected by the resilience.

Special foams

Each Stübben spring tree is formed by an elaborate process. Here several layers of special foams are applied, which in use ensure a pleasant and gentle seat for the rider. As individual wishes of the rider, so adaptable is the Stübben saddle.

Gullet

The Stübben spring tree is fitted with a double cranked gullet of hardened steel which not only reliably protects the horse's wither against injury, but also keeps the saddle behind the shoulder.

Stirrup bar

The stainless and unbreakable stirrup bars are recessed into the spring tree. This gives ultimate comfort and no obstruction against the rider's thighs.

A constant innovation

There exists no seat more pleasant for the rider. Furthermore, the back of the horse is protected by the resilience provided in the tree. A Stübben saddle tree is precious, expensive to produce, and unsurpassed in its effect. Stübben is constantly striving to improve the technology and perfect the mode of the saddle tree.

Adapt the width of a Stübben saddle tree

The Stübben saddle may be altered any time in its width by means of the device Change-a-Stübben, developed in-house. During the process of change only the ends of the gullet are dimensionally adapted. As a result, negative effects on the statics of the tree, and in particular of the side cut, are prevented. During riding, the gullet remains stable and its durability stays the same. The adjustment on the tree only takes place at the tree points. The possible change includes the tree sizes 28 up to 32 cm. Trees with the special width XW need to be changed in-house at the Stübben factory.

Other options

BIOMEX saddle seat Technology

Stübben has collaborated with the BIOMEX Technology Development Centre of Klinik Gut, a Swiss Hospital for Orthopaedics, Accident Care and Sports Medicine based in St. Moritz. Combined with feedback from professional riders, we have developed an innovative saddle seat which promotes correct posture, thus relieving the rider's back from too much pressure. False posture leads to an increased axial pressure on the back and furthermore to dorsal problems. Riders complain about occasional back pain, i.e. 23.8% experience pain while riding, and 55.2% after riding. The BIOMEX Saddle Seat Technology may help prevent back pain.

Cantle protection

The cantle protector made of stainless steel is an attractive and practical protection. The cantle protector can be added at the manufacturing stage or as an addition later in the life of the saddle. The smart cantle protector is available to suit both the square and curved cantle saddles, and is available in different metal colours.

Magic Tack option

Discover our Magic Tack cantle options! The interchangeable inlay system enables to vary the look of your saddle within seconds. It is available on some of our dressage models. Many different colours are available so you can choose your favourites. The Magic Tack system is also available for the browband, to fit your bridle to your saddle.

TC[®] TreeClix^{new}

The importance of the right tree width

What is TreeClix?

Fast & easy alteration of the tree width with only one click

Many horses undergo frequent changes in their physical condition. It's crucial to ensure that the saddle adapts to these ongoing changes in your horse's condition. With TreeClix, the tree width of your saddle can be narrowed down to two sizes, to ensure the perfect fit all year long.

A perfect fit, every time!

By using the TreeClix system, your saddle can be effortlessly adjusted with seven different wedges. This allows for precise adjustments to the tree, ranging from 5 mm to 3.5 cm, based on your horse's specific needs and current shape. This is achieved super quickly and easily, without changing the gullet iron with pressure, preserving the full integrity of the tree.

The base

The base can be installed directly when manufacturing the saddle, or later on if needed. Any Stübben saddle tree (except for the REV saddle

tree) can be equipped with the TreeClix system without any negative effect on the look and functionality of the saddle.

The wedges

The TreeClix wedges feature a tapered design and a rounded base for maximum comfort. These wedges can be securely attached with just one 'click' onto the base without requiring any tools. With seven different thicknesses available, they enable a wide range of adjustments to the tree width and can be exchanged as often as necessary by your saddle fitter.

Regular follow-up

You can contact one of our saddle fitters to check your saddle and see if the tree width is still perfect or if narrowing it could help. Regular monitoring ensures that your saddle always fits your horse as well as possible, especially when a lot of changes happen throughout the year.

Equi-Soft[®] 

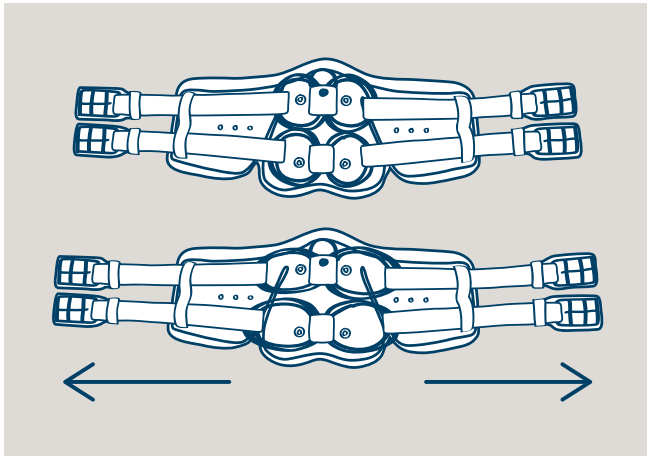

Equi-Soft® girths

Design and innovation for the well-being of the horse

More freedom of movement and breathing for your horse with the Equi-Soft® girth. The unique system of elastic rings provides perfect girth pressure distribution. The movable rings of the Equi-Soft® follow the horse's breathing movement to reduce pressure to a minimum and ensure maximum freedom of movement. The Equi-Soft® also helps to reduce discomfort and stress symptoms of girthy horses and enables free breathing of stressed horses during exercise.

Moving along the movements and breathing

The elastic rings allow your horse to breathe better. They expand and contract with the horse's rib cage and maintain an even and comfortable tension. The Equi-Soft® girth has an ergonomic shape and is flexible. This special design provides freedom of movement to your horse and significantly reduces girthingness. The elastic rings of the Equi-Soft® give the horse freedom of movement, lowering the girth pressure and thus the stress level of the horse. This girth is not intended for jumping.

Also exists as a stud girth and a Western girth

The Equi-Soft® is also available as a stud protection girth in the colours black, ebony, or tobacco for the course and cross-country. The girth reliably protects the horse from injuries when jumping. The Western version of the Equi-Soft® is available in Tobacco and can be used with the same pad as the Equi-Soft®. It features wider buckles so that it can be used with a Western saddle.

How to put on the girth correctly?

First, attach the pad of your choice to the girth while keeping the girth curved, just as it would be on your horse. Make sure that the front of the girth, especially the corners, is covered by the pad. The centre of the girth must be placed centrally on the horse's girth line. For optimal pressure distribution, even girthing on both sides is recommended. The girth should also not be pulled too tight, otherwise it will hinder the expansion of the rib cage.

Pro-Jump Safety

A simple way to stay safe

At Stübben, we understand that riding can be a risky sport. That's why we manufacture our products from high-quality materials, and strive to innovate to help ensure your safety and that of your horse. The Stud Girth Pro-Jump Safety is equipped with an exclusive, patented attachment system for breastplates and martingales. Thanks to the Safety Stick, the breastplate or martingale will detach quickly from the girth if e.g. the horse gets caught in it with a hoof or a stud when jumping. This way accidents and falls of this kind can be avoided.

Only opens when needed

The system is only released when the breastplate or martingale gets pulled downwards - it cannot open unintentionally e.g. over an obstacle or when the saddle is moving backwards.

Universal system

The shape of the Safety Stick makes the system compatible with most breastplates and martingales, whether they feature a buckle or a carabiner hook. When no breastplate is used, the basis of the Safety Stick will not interfere with the horse's movements or the aesthetics of the girth.

Respects the horse's movements

The anatomical design of the girth allows free movement of the forelegs, distributes pressure evenly and protects effectively against injuries from studs at the same time. It also helps giving more stability to the saddle.

Pro-Jump bridle

Bridle Pro-Jump with Slide&Lock fastening

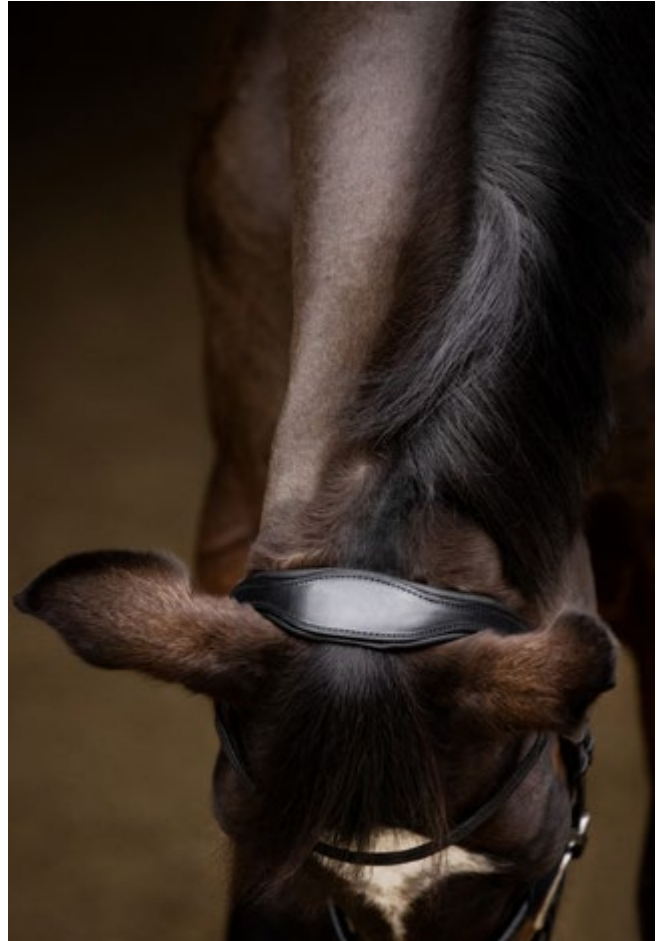

Together with the Stübben team riders we have developed a snaffle bridle, which suits the horse's anatomy and offers the necessary precision for the higher classes of show jumping at the same time.

Thought-out design

The Pro-Jump snaffle bridle has a unique head-piece - it has been carefully designed to reduce pressure on the horse's ears and neck. The cut-back shape of the headpiece provides sufficient clearance for the ears of differently built horses. Very soft foam padding distributes pressure evenly, while the sensitive area of the cervical spine has been left out in order to relieve it.

New innovative buckles

Our revolutionary, exclusive Slide&Lock fastening on the cheek pieces allow for effortless bit changes in no time: simply push up the metal sleeve and the pin releases the leather loop. Once the bit has been changed, push the sleeve back down until it clicks into place.

Different noseband options

Combined noseband: softly padded with a completely removable flash (RFS - Removable Flash System)

Mexican noseband: soft lambskin pads under the rings and the crossing point of the noseband prevent unpleasant pressure points

Tandem noseband: combines the effect of the Hanoverian and English nosebands to give the horse more frame and distribute pressure, precise adjustment due to adjustable distance between both nosebands

Rope noseband covered with leather: designed for experienced riders – it offers a stronger action for more control, soft leather covering to protect the bridge of the nose (seams are turned away from the horse), completely removable flash (RFS - Removable Flash System).

Freedom II bridle

Feel the difference

Discover the new generation of the Freedom Bridle - the Freedom II. With a completely revised design, we are setting new standards in horse-friendliness and comfort. The Freedom snaffle bridle has been completely redesigned together with an equine dentist in order to make it even more comfortable for horses whilst improving the fit.

Less pressure

The unique Freedom snaffle bridle takes your horse's anatomy and biomechanics into account. The eyes and ears are the most important means of communication for horses. Neither the browband nor the headpiece of the Freedom snaffle bridle cross the 16 muscles of the horse's ears. Since no pressure is exerted on nerves and veins, the Freedom snaffle bridle allows full freedom of movement of the ears.

Freedom and joy of movement

The special positioning of the headpiece and throatlatch leaves out the sensitive areas of the poll and throat - the horse's flight instincts are thus not triggered. Instead of provoking refusal and discomfort, the horse can develop its full joy of movement and willingness to work without hindrance. The stress factors often caused by conventional snaffle bridles are avoided.

Unrestricted field of vision

With conventional snaffle bridles, the cheekpieces often restrict the field of vision towards the back. With the Freedom snaffle bridle it is maintained thanks to the innovative cheek piece layout: the arch spares the eye as well as sensitive nerves in this area. This helps the horse maintain a global perception of its environment, limiting the risk of fearful responses to surprising events.

Slide&Lock system

Reason for a change

Changing bits is always a fuss with conventional buckles or hook studs – especially if the leather has become a little bit stiff over time and it needs to be done fast. Often a tool like a hoof pick is needed to release the leather with force. This is particularly impractical and uncomfortable, when changes are made on the horse! We have developed the innovative sliding buckle (patent pending), in order to make changing bits an easy and quick task within the blink of an eye.

Make the rider's life easier

The sliding buckle is a game changer for daily equestrian life with its simple and fool-proof system. It only consists of two parts: a sleeve with rounded edges for the horse's comfort and a base with a pin to adjust and fix the leather strap and a stopper preventing the sleeve from being pushed too far, making this system completely secure. The sliding buckle can be opened and closed effortlessly - in theory with just one hand! It's particularly handy for professionals, who change bits often.

Unique and innovative

There is no comparable system available on the horse tack market - the sliding buckle is unique and one of a kind. Conventional buckles and hook studs are ergonomically awkward to use: the end of the leather strap is pulled upwards first to release the buckle pin or hook stud, then pulled downwards to open and let go of the bit. This takes a lot of effort – especially if it hadn't been opened in a while. If this is done on the horse, it will pull on the muzzle in a very unpleasant way.

High-quality material

The sliding buckle is made of sturdy stainless steel, making it a very long lasting and high-quality product, which won't rust.

Easy to use

Simply slide up the metal sleeve and the appearing pin releases the leather - the bit can then get changed. Once the change is done, just slide the sleeve back downwards over the base. The spring-ball at the end of the pin snaps securely into place inside the sleeve. The clicking noise confirms the secure locking acoustically.

Timeless design

The sleek and minimalist design of the sliding buckle with its rounded edges and discreet branding, make it an adornment for bridles whilst being absolutely timeless. The sliding buckle comes in silver and graphite – either creating a classy contrast or blending in discreetly.

Magic Tack system

Making it easy

Conventional bridle browbands can only be replaced in a time-consuming and annoying manner. The Magic Tack click system makes it possible to change the browband in seconds and thus offers equestrians the constant possibility of individualization.

Time to shine

The base is formed by the loops, made of high-quality leather, which are attached to the bridle. The Magic Tack Blings, studded with Swarovski crystals, have magnetic ends that can be easily clicked into the loops without having to disassemble the bridle. This ensures a quick and easy transformation of the browband.

Many possibilities

Different looks offer variety and freedom for individual design. Whether curved and straight options both come in many different colours and patterns. The loop is available in three different lengths, as well as in the colours ebony,

black and tobacco. You can either buy a bridle that already has the Magic Tack option including a crystal bling, or replace your regular browband by the loops and blings of your choice. Fill your collection later on so you can fit your bling with your mood, your style, your outfit...

Suitable for every setting

Crystal Blings may be the most dazzling, but they're not necessarily suitable for every context. When sobriety is required, you can choose from our selection of more discreet leather blings.

Also for saddles

The Magic Tack system is also available on some of our dressage saddles cantle. Switch between the different colours available so you can never grow tired of your saddle!

Pro-Jump breastplate

The Breastplate Pro-Jump with 3-point attachment is very easy to put on

Simply slip it over the neck of the already saddled horse and attach the carabiners to the D-rings and reins. There are various possibilities for attaching the breastplate to the girth. The girth-strap can be adapted to all common girths in no time: with a carabiner to attach to a D-ring or a loop to hook onto girths with snap hook or the Stübben Pro-Jump Safety System.

Comfort and safety

For more comfort and safety, all fastening points of the breastplate are accessible either from the front or the side. Since no strap is doubled in a loop, fitting is a lot easier and the breastplate offers an even greater range of adjustment for differently built horses. It is also lightweight.

The slim and lightweight design is adapted to the horse's anatomy

Thanks to the attachment to the D-rings of the saddle as well as the elastic inserts on the neck straps, the breastplate offers maximum freedom of movement for the shoulders and stability for the saddle at the same time. Soft padding in the front reduces pressure and friction.

Available with open or closed martingale

The martingale, whether open or closed, is completely removable and adjustable in length. It is attached to the breastplate by a leather strap, thus avoiding any metallic jingling that might annoy the horse. It can be easily clipped onto the reins thanks to a system of snap rings.

Boots

Protection when it matters

Hybrid Tendon Boots

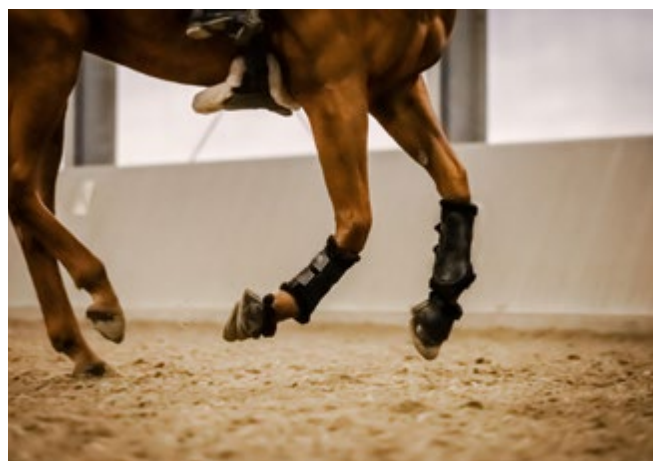

Compared to regular Hard Shell jumping boots, our Hybrid Tendon Boots combine reliable protection with unique flexion. The revolutionary cutaway injection mould design allows natural range of movement without interference. The Hard Shell offers safe and reliable impact protection. The vented design allows ventilation throughout the boot for heat transference.

Hybrid Fetlock Boots

The Hybrid Fetlock Boots reliably protect the horse's hind legs from knocks thanks to their robust hard shell design. Their anatomical fit and their light weight, promote the horse in the natural movements, without restrictions. The Velcro closure provides a secure hold.

Support your horse in every aspect of its life

How does the set work?

Stübben x EQUI compress results from the work of equine physiotherapist Franzi Bechberger-Gaber, in collaboration with veterinarians and experts in lymphology. When a horse is immobile for long periods or trained intensively, the lymphatic system and its metabolic waste evacuation might not function correctly, leading to leg swelling and slow tissue regeneration. The compression stockings Stübben x EQUI compress counter this. They stimulate the lymphatic system through optimal pressure and effective pumping function.

The benefits of EQUI compress

Compression therapy involves applying pressure from the extremities towards the heart to narrow blood vessels. This enhances blood circulation, improving the flow back to the heart and preventing oedema or swelling. It also helps restore the functionality of the valves in veins and lymphatic vessels by bringing them closer, thus speeding up the removal of metabolic waste from the body. Furthermore, EQUI

compress stimulates the fascia, improving tissue health, and relieves tension in the bow tendons. Overall, it reduces congestion in the extremities, providing relief and well-being.

Set content

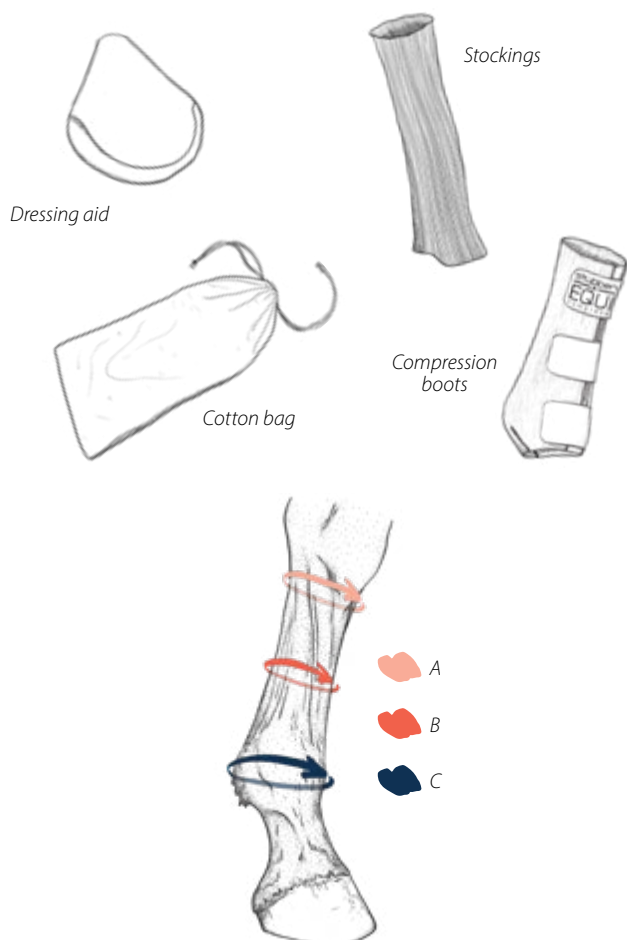

- compression stockings for the horse, going from right under the knee down to the hoof
- compression boots, either for the front or hind legs, to wear on top of the stockings
- a dressing aid to help put the stockings on
- a wash and storage cotton bag

For the optimal recovery of her horses, Ingrid Klimke relies on EQUI compress.

Groundwork

It is not just about horseback riding

A horse-centred perspective

The Andrea Kutsch Academy developed a horse training method that anyone can learn. It is called Evidence Based Equine Communication. This education method comes from a horse-centred perspective. During the years of its development, training materials were developed to make it easy for human and horse to communicate. It has been proven that horses memorize bad experiences faster than good ones. Therefore, it is better to “get it right first time” and use training materials that can be relied upon. At the Andrea Kutsch Academy you learn how the AKA powered by Stübben material helps you set the right impulses.

AKA Long lines

The AKA long lines can be used for different lunging techniques. They can also be used for ground work. Their ends are reinforced.

AKA Surcingle

The AKA Surcingle stands out by its large D-rings. These allow the attachment of various training equipment.

AKA Chest strap

The AKA chest strap prevents the saddle or the surcingle from slipping. It can also be helpful for sensitive horses, to allow the girth to be tightened very smoothly.

AKA Connecting strap

The AKA Connecting strap connects the stirrups under the horse's belly so they can be used like sliding rails for long lines.

AKA Starter bridle

The AKA Starter Bridle is kept simple to allow youngsters freedom of movement with the bit.

Bucephalus Pro Horse bits

stubben
STEELTEC

Bucephalus Pro Horse bit

The "Bucephalus pro horse bit" is a soft action loose ring snaffle bit. The reins are attached to the bit with two strong rubber bands within the O-rings. This creates a flexible connection between the riders hand to the horse's mouth thus encouraging the connection from the hind leg into the rein. The pressure transmitted through the horse's mouth is reduced thereby promoting forward motion, rhythm and a softer contact. This naturally encourages elasticity in the horse's movement and willingness in the collection.

sweet COPPER

Sweet Copper Mouth

- Sweet Copper is a solid and high-quality nickel free copper alloy, that consists of 89% copper
- It activates saliva production and encourages the horse's responsive reaction to the rider's direction

Fine Line

Our Fine Line bits were specially designed for the double bridle. They are thin but comfortable and simple but efficient. That makes them easy to combine in a pair with a Weymouth or a bradoon.
