A horse, a rider, Stübben

Where tradition meets modernity

Stübben has been connecting riders and horses all over the world since 1894. From the heart of Europe, the fifth-generation family-owned business develops products that set new standards. We offer high-quality materials that aid high-quality sports performance. We are convinced that the well-being of the horse AND the rider is the basic prerequisite for this ideology. Thereby, our regularly patented innovations are based on the principle of supporting the bio-mechanics of the horse and rider partnership.

Our company is full of passionate people, who try every day to do their best in the field of saddlery, saddle fitting, design, logistics, marketing... Our love for horses unites us and motivates us to always commit ourselves and make our motto a reality:

"To commit to innovation and service excellence so that the well-being of your horse is the foundation for you to build a true partnership and do what seemed impossible"

Saddles

The perfect fit for you and your horse

Dressage saddles

Euphoria

Seat sizes:

17,0" - 17,5" - 18,0"

Tree widths:

27 cm - 28 cm - 29 cm - 30 cm - 31 cm - 32 cm - XW

Colours:

From €3.750,00 / £3,400.00

Features:

- special deep seat
- V-webbing
- ready for forth billets
- NT saddle tree with narrow twist

Included:

- gusset panel
- long billets

Options:

- | | |
|--|-------------------|
| • configuration BIOMEX | €270,00 / £245.00 |
| • de Luxe version | €320,00 / £290.00 |
| • reinforcement strip (only possible with de luxe version) | €90,00 / £81.00 |
| • cantle overlay with MT + standard inlay | €250,00 / £225.00 |
| • Stübben Styles | €250,00 / £225.00 |
| • Stübben Custom | €350,00 / £315.00 |

Centurion II

new

Seat sizes:

16,5" - 17,0" - 17,5" - 18,0"

Tree widths:

27 cm - 28 cm - 29 cm - 30 cm - 31 cm - 32 cm - XW

Colours:

From €4.950,00 / £4,500.00

Features:

- Close Contact mono-flap
- innovative new feature: in no time at all the external block can be adjusted for a perfect leg position without the need for any tools. This feature is also ideal if multiple riders are using the same saddle
- narrow twist saddle tree and extra deep seat with plenty of freedom of movement and closeness to the horse

Included:

- "Stübben" written with 3D effect letters in the gullet channel
- long billets
- additional soft padding creates a flowing transition between the flap and block which comfortably embeds the knee

Options:

- | | |
|---|-------------------|
| • cantle overlay with MT + standard inlay | €250,00 / £225.00 |
| • gullet channel can be personalized with 3D effect letters (e.g. horse's name) | €150,00 / £140.00 |
| • Stübben Styles | €250,00 / £225.00 |
| • Stübben Custom | €350,00 / £315.00 |

Centurion II

The Centurion II ushers in a new era of mono flap saddles

With conventional mono-flap saddles, as with the predecessor model Centurion I, it is not possible to individually adjust the exterior blocks to the rider. This problem does no longer exist. The completely redesigned blocks can be adjusted to the rider's desired position in just a few simple steps. The blocks can be adjusted to different people very easily, even with the rider in the saddle.

The clou

Neither optics nor stability are negatively affected. Classic dressage can be perfectly combined with the modern dressage horse type. The Centurion II offers you enough space to find your own centre of gravity and equally supports you when your horse makes big, sweeping movements.

Close Contact redefined

Being close to your horse has been redefined in this saddle. The wide seat in the area of the ischial tuberosities and the deep seat allows you to feel your horse's movement while giving you the chance to precisely giving aids. The mono flap moulds around the ribcage when fastening and additionally reinforces the close contact to your horse. An additional reinforcement below the gullet plate prevents pressure points and improves the distribution of the rider's weight. The wide contact surface also offers the horse a high level of comfort and with the help of many different panel cuts, tree adjustments and much more, a custom solution can be found for almost every horse. The Centurion II offers many configuration possibilities in terms of both, custom fit and design.

Brand new

For the first time, the gullet leather between the panels can be individualized. The Stübben styles and custom options make this saddle a beauty, second to none.

Genesis

Seat sizes:

17,0" - 17,5" - 18,0" - 18,5" - 19"

REV saddle

The saddle REvolution - Stübben x Martin Ryan

The new saddle REvolution from Stübben in collaboration with the award-winning innovator Martin Ryan offers ultimate comfort for both horse and rider, unique modular system supports interchangeable saddle flaps and an unbeatable fit across a wide range of wither profiles with just one saddle.

The saddle tree innovation

The patented and award-winning saddle tree was developed to distribute the forces during riding as evenly as possible over a larger full-surface saddle area on the horse's back. The rider's seat is separated from the horse's anatomically contoured support surface through a patented cantilevered saddle tree. The distance between the seat and the horse's support surface is adjustable by means of adjustment, and so is the strength of the spring action. The shock-absorbing action also reduces jerky and possibly uncontrolled load effects making the most comfortable ride.

Interchangeable saddle flaps

Whether longer trekking rides, jumping or dressage, this saddle allows you to combine the different equestrian disciplines in just one model. The saddle tree comes with a three-point girthing system, delivering a secure contact with the horse, as well as double stirrup bar that offers two leg positions, forward (jumping) or backward (dressage). The seat cover as well as the three different saddle flap variants in the forms trekking, jumping and dressage can be changed easily by means of a patented push button system. Similarly, the natural wool-filled saddle panels can be removed and reattached in just a few simple steps for reupholstering or re-padding.

Adjustable chamber width

A special feature from the horse's point of view is the large bearing surface of the saddle tree on the horse's back. The design follows years of analysis ensuring the saddle fits a wide variety of horses. In contrast to classic saddle trees this saddle offers a continuous bearing surface on the horse's back from front to back. In exceptional cases, the saddle tree can be adapted to a narrow/high wither or a wide horse's back simply by screwing on chamber width wedges for a better fit.

Stübben Custom

It's in the details

Our customization options are almost endless! Show your true colours and create your very own combination for a unique saddle. From the base colour to the cantle, from the stitching to the metal fittings, create the saddle of your dreams. All of our saddles can be customized in option. Book a fitting to find the perfect model for you and your horse and to create your custom saddle.

Stübben Styles

Find your own style

With too many customization options it can be difficult to make a choice! To help you get the saddle of your dreams, we now propose the Stübben Styles: 20 outstanding designs available for all Stübben saddle models. Those beautiful and unique styles have different base and trim colours, metal fittings and stitching colours to suit your desires. In tribute to our talented two- and four-legged athletes, we named the styles after the different cities of the Summer Olympics. Our leather

Our leather and materials selection

What makes us different is our complete dedication to quality. This is reflected in our choice of materials and through all steps of processing. Hence, the leather we use is eco-friendly to manufacture, lighter and durable for long-time use.

Full grain leather

Our material and supplier selections have always been of top quality and sustainability. The dominating material in our workshop is leather, and by far the most important resource. Selecting quality raw hides is the key. At Stübben we only process Central European full grain leather. The majority of our leather is from the "Simmentale" cow breed. In order to maintain the functionality of the hide, the top layer needs to be preserved. Only full grain leather features breathability, tensile strength and wear resistance. This is very important in Equestrian sports as the material is exposed to a high degree of wear and tear. Variations of weather, contact of sweat and abrasion can challenge the material. Because full grain leather is breathable it helps to reduce the

temperature which minimizes perspiration and aids in grip of the saddle. We ensure this with our specific tanning process where the pores of the leather are not sealed. Using all three layers of hide, the epidermis included, is what makes our leather strong and wear resistant.

Tanning process

The tanning process is what converts the raw-hide to leather. There are multiple tanning methods, with most falling into three categories, chrome tanning, vegetable tanning and metal free tanning. At Stübben, we process metal free tanned leather, which is hypo-allergenic and up to 25% lighter than chrome and vegetable tanned leather. It also has a smaller environmental footprint (Co2 production, water consumption and wasted water are reduced), a higher UV resiliency and is thermo neutral. With full confidence we can say that you will find no better leather product in the equestrian industry than Stübben. In addition with leather, most of our materials are being sourced and made in Europe. For example our saddle tree is made in France, our saddle nails are made in Italy and our foam and webbing are made in Germany.

A close-up photograph of four leather saddle straps, likely from a Western saddle, arranged diagonally from the top left to the bottom right. The straps are made of a textured leather material. The colors, from top to bottom, are Tobacco (a warm, medium brown), Redwood (a slightly darker, more saturated brown), Ebony (a very dark, almost black brown), and Black (a true, deep black). The lighting is soft, highlighting the grain of the leather and the slight curves of the straps.

Saddle fitting

Book a fitting

After requesting a fitting, we will put you in touch with our local retail partner and/or saddle fitter who will help you find the right model and evaluate the best possible fit for both horse and rider.

Fit & Balance - our custom approach

The ultimate goal of saddle fitting is to balance the saddle on the horse's back to evenly distribute the rider's weight and properly clear the horse's anatomy (withers, spine, shoulder, and rib cage), allowing for freedom of movement and for the rider to sit in an effortlessly balanced seat. How do we get to this point?

Example of the model Portos

7 tree width options, 4 seat sizes, 2 twist widths, 11 flap cuts, 8 panel flocking alterations = 4,928 possible variations. Thus, you can be sure that there is a solution for your specific requirements. To find these, we roughly outline the following:

Tree widths

The appropriate tree width is defined by an even pressure distribution over the entire surface of the saddle tree points with sufficient freedom for the wither.

Seat size

The right seat size is one of the few parameters that doesn't relate to the horse's anatomy. It is impossible to balance the saddle if the seat size is too small for the rider. The seat size is correct when the rider's seat bones are in the centre of gravity (lowest point in the saddle).

Panels

Our panel options along with different flocking variations enable the accommodation of diverse wither shapes as well as proper fit along the horse's spine. Again, the goal is to balance the saddle. To this end, we have developed customized solutions that take into account shoulder shape disparities, as well as rib cage circumference. By including these in our fit determination we help you achieve better performance from your horse. Our patented spring tree ensures that the rider's weight is only carried over

**Scan me to
book a fitting!**

the length of the tree. Our panels are at least as long as the tree and only as long as necessary. So the effective contact area (where pressure from the rider on the tree is transferred to the horse) is 42 cm maximum and 38 cm minimum.

Flaps

The flap cut is determined by the leg's anatomy and riding style preferences of the rider. Up to 11 different flap cuts are available depending on the saddle model. Regardless of cut, our panels and flaps are flexible around the area of the tree points in order to ensure the horse's freedom of movement.

Manufactured in Europe

Our saddles are produced individually for every customer and their horse. We manufacture all saddles and leather accessories in-house. The saddles come from our workshops in Germany, and our leather accessories from Spain. Most of our raw materials are of European origin. Production of your customized saddle normally takes 6-8 weeks. It will be delivered to you directly. After a further 6-8 weeks the saddle will be checked free of charge and flocking adjusted if necessary.

All the fitting options necessary to perfectly adapt the saddle to the horse and the rider are included in the price.

Saddles

Our saddle tree

Steel spring tree with elasticated webbing

Stübben saddles are built on the unique Stübben saddle tree. The tree is stretched by means of a special belt whereby the tensile and compressive forces perfectly keep in balance, producing the ultimate spring tree. The result creates a comfortable sitting experience for the rider. The Stübben spring saddle tree is the custom-made connection between rider and horse. The rider sits in the elastic webbing of the saddle tree, which contracts slightly under his weight, and when relieving the stress stretches anew due to the interior mounted steel springs. As a result the back of the horse is protected by the resilience.

Special foams

Each Stübben spring tree is formed by an elaborate process. Here several layers of special foams are applied, which in use ensure a pleasant and gentle seat for the rider. As individual wishes of the rider, so adaptable is the Stübben saddle.

Gullet

The Stübben spring tree is fitted with a double cranked gullet of hardened steel which not only reliably protects the horse's wither against injury, but also keeps the saddle behind the shoulder.

Stirrup bar

The stainless and unbreakable stirrup bars are recessed into the spring tree. This gives ultimate comfort and no obstruction against the riders thigh.

A constant innovation

There exists no seat more pleasant for the rider. Furthermore, the back of the horse is protected by the resilience provided in the tree. A Stübben saddle tree is precious, expensive to produce, and unsurpassed in its effect. Stübben is constantly striving to improve the technology and perfect the mode of the saddle tree.

Adapt the width of a Stübben saddle tree

The Stübben saddle may be altered any time in its width by means of the device Change-a-Stübben, developed in-house. During the process of change only the ends of the gullet are dimensionally adapted. As a result, negative effects on the statics of the tree, and in particular of the side cut, are prevented. During riding, the gullet remains stable and its durability stays the same. The adjustment on the tree only takes place at the tree points. The possible change includes the tree sizes 28 up to 32 cm. Trees with the special width XW need to be changed in-house at the Stübben factory.

Other options

BIOMEX saddle seat Technology

Stübben has collaborated with the BIOMEX Technology Development Centre of Klinik Gut, a Swiss Hospital for Orthopaedics, Accident Care and Sports Medicine based in St. Moritz. Combined with feedback from professional riders, we have developed an innovative saddle seat which promotes correct posture, thus relieving the rider's back from too much pressure. False posture leads to an increased axial pressure on the back and furthermore to dorsal problems. Riders complain about occasional back pain, i.e. 23.8% experience pain while riding, and 55.2% after riding. The BIOMEX Saddle Seat Technology may help prevent back pain.

Cantle protection

The cantle protector made of stainless steel is an attractive and practical protection. The cantle protector can be added at the manufacturing stage or as an addition later in the life of the saddle. The smart cantle protector is available to suit both the square and curved cantle saddles.

Magic Tack option

Discover our Magic Tack cantle options! The interchangeable inlay system enables to vary the look of your saddle within seconds. It is available on some of our dressage models. Many different colours are available so you can choose your favourite.

ities. The Magic Tack system is also available for the browband, so you can fit your bridle to your saddle.

Equi-Soft[®] 

Equi-Soft girths

Design and innovation for the well-being of the horse

More freedom of movement and breathing for your horse with the Equi-Soft® girth. The unique system of elastic rings provides perfect girth pressure distribution. The movable rings of the Equi-Soft® follow the horse's breathing movement to reduce pressure to a minimum and ensure maximum freedom of movement. The Equi-Soft® also helps to reduce discomfort and stress symptoms of horses tending to saddle tightness and enables free breathing of stressed horses during exercise.

Moving along the movements and breathing

The elastic rings allow your horse to breathe better. They expand and contract with the horse's rib cage and maintain an even and comfortable tension. The Equi-Soft® girth has an ergonomic shape and is flexible. This special design provides freedom of movement to your horse and significantly reduces girthiness. The elastic rings of the Equi-Soft® give the horse freedom of movement, lower the girth pressure

and thus the stress level of the horse. A comparative study of different girths certifies: all horses, without exception, had a lower heart rate with the Equi-Soft® girth.

Also exists as a stud girth

The Equi-Soft® is also available as a stud protection girth in the colours black, ebony or tobacco for the course and cross-country. The girth reliably protects the horse from injuries when jumping.

How to put on the girth correctly?

Make sure that the cover is fixed correctly on the girth and the holes are free. The centre of the girth must be placed centrally on the horse's girth line. For optimal pressure distribution, even girthing on both sides is recommended. The girth should also not be pulled too tight, otherwise it will hinder the expansion of the rib cage.

Pro-Jump Safety

A simple way to stay safe

The Stud Girth Pro-Jump Safety is equipped with an exclusive, patented attachment system for breastplates and martingales. Thanks to the Safety Stick, the breastplate or martingale will detach quickly from the girth if e.g. the horse gets caught in it with a hoof or a stud when jumping. This way accidents and falls of this kind can be avoided.

Only opens when needed

The system is only released when the breastplate or martingale gets pulled downwards - it cannot open unintentionally e.g. over an obstacle or when the saddle is moving backwards.

Universal system

The shape of the Safety Stick makes the system compatible with most breastplates and martingales.

Respects the horse's movements

The anatomical design of the girth allows free movement of the forelegs, distributes pressure evenly and protects effectively against injuries from studs at the same time.

Pro-Jump bridle

Bridle Pro-Jump with Slide&Lock fastening

Together with the Stübben team riders we have developed a snaffle bridle, which suits the horse's anatomy and offers the necessary precision for the higher classes of show jumping at the same time.

Thought-out design

The Pro-Jump snaffle bridle has a unique headpiece - it has been carefully designed to reduce pressure on the horse's ears and neck. The cut-back shape of the headpiece provides sufficient clearance for the ears of differently built horses. Very soft foam padding distributes pressure evenly, while the sensitive area of the cervical spine has been left out in order to relieve it.

New innovative buckles

Our revolutionary, exclusive Slide&Lock fastening on the cheek pieces allow for effortless bit changes in no time: simply push up the metal sleeve and the pin releases the leather loop. Once the bit has been changed, push the sleeve back down until it clicks into place.

Different noseband options

Combined noseband: softly padded with a completely removable flash (RFS - Removable Flash System)

Mexican noseband: soft lambskin pads under the rings and the crossing point of the noseband prevent unpleasant pressure points

Tandem noseband: combines the effect of the Hanoverian and English nosebands to give the horse more frame and distribute pressure, precise adjustment due to adjustable distance between both nosebands

Rope noseband Covered with Leather: designed for experienced riders – it offers a stronger action for more control, soft leather covering to protect the bridge of the nose (seams are turned away from the horse), completely removable flash (RFS - Removable Flash System).

Slide&Lock system

Ground for a change

Changing bits and reins is always a fuss with conventional buckles or hook studs – especially if the leather has become a little bit stiff over time and it needs to be done fast. Often a tool like a hoof pick is needed to release the leather with force. This is particularly impractical and uncomfortable, when changes are made on the horse! We have developed the innovative sliding buckle (patent pending), in order to make changing bits and reins an easy and quick task within the blink of an eye.

Make the rider's life easier

The sliding buckle is a game changer for daily equestrian life with its simple and fool-proof system. It only consists of two parts: a sleeve with rounded edges for the horse's comfort and a base with a pin to adjust and fix the leather strap and a stopper preventing the sleeve from being pushed too far, making this system so secure. The sliding buckle can be opened and closed effortlessly - in theory with just one hand! It's particularly handy for professionals, who change bits and reins often.

Unique and innovative

There is no comparable system available on the horse tack market - the sliding buckle is unique and one of a kind. Conventional buckles and hook studs are ergonomically awkward to use: the end of the leather strap is pulled upwards first to release the buckle pin or hook stud, then pulled downwards to open and let go of the bit or rein. This takes a lot of effort – especially if it hadn't been opened in a while. If this is done on the horse, it will pull on the muzzle in a very unpleasant way.

High-quality material

The sliding buckle is made of sturdy stainless steel, making it a very long lasting and high-quality product, which won't rust.

Easy to use

Instructions for use: Simply slide up the metal sleeve and the appearing pin releases the leather - the length can be altered or the bit or rein get changed. Once the adjustment is done, just slide the sleeve back downwards over the base. The spring-ball at the end of the pin snaps securely into place inside the sleeve. The clicking noise confirms the secure locking acoustically.

Timeless design

The sleek and minimalist design of the sliding buckle with its rounded edges and discreet branding, make it an adornment for bridles and reins whilst being absolutely timeless. The sliding buckle comes in silver and graphite – either creating a classy contrast or blending in discreetly.

Magic Tack system

Making it easy

Conventional bridle browbands can only be replaced in a time-consuming and annoying manner. The Magic Tack click system makes it possible to change the browband in seconds and thus offers equestrians the constant possibility of individualization.

Time to shine

The basis is formed by the loops, made of high-quality leather, which are attached to the bridle. The Magic Tack Blings, studded with Swarovski crystals, have magnetic ends that can be easily clicked into the loops without having to disassemble the bridle. This ensures a quick and easy transformation of the browband.

Many possibilities

Different looks offer variety and freedom for individual design. Whether curved and straight options both come in many different colours and patterns. The loop is available in three different lengths, as well as in the colours ebony,

black and tobacco. You can either buy a bridle that already has the Magic Tack option including a crystal bling, or replace your regular browband by the loops and blings of your choice. Fill your collection later on so you can fit your bling with your mood, your style, your outfit...

Also for saddles

The Magic Tack system is also available on some of our dressage saddles cantle. Switch between the different colours available so you can never grow tired of your saddle!

Pro-Jump breastplate

The Breastplate Pro-Jump with 3-point attachment is very easy to put on:

Simply slip it over the neck of the already saddled horse and attach the carabiners to the D-rings and reins. There are various possibilities for attaching the breastplate to the girth. The girth-strap can be adapted to all common girths in no time: with a carabiner to attach to a D-ring or a loop to hook onto girths with snap hook or the Stübben Pro-Jump Safety System.

Comfort and safety

For more comfort and safety, all fastening points of the breastplate are accessible either from the front or the side. Since no strap is doubled in a loop, fitting is a lot easier and the breastplate offers an even greater range of adjustment for differently built horses.

The slim and lightweight design is adapted to the horse's anatomy:

Thanks to the attachment to the D-rings of the saddle as well as the elastic inserts on the neck straps, the breastplate offers maximum freedom of movement for the shoulders and stability for the saddle at the same time. Soft padding in the front reduces pressure and friction.

Available with open or closed martingale.

Hybrid Tendon Boots

Compared to regular Hard Shell jumping boots, our Hybrid Tendon Boots combine reliable protection with unique flexion. The revolutionary cutaway injection mould design allows natural range of movement without interference. The Hard Shell offers safe and reliable impact protection. The vented design allows ventilation throughout the boot for heat transference.

Hybrid Fetlock Boots

The Hybrid Fetlock Boots reliably protect the horse's hind legs from knocks thanks to their robust hard shell design. Their anatomical fit and their light weight, promote the horse in the natural movements, without restrictions. The Velcro closure provides a secure hold.

Groundwork

new

It is not just about horseback riding

A horse-centred perspective

The Andrea Kutsch Academy developed a horse training method that anyone can learn. It is called Evidence Based Equine Communication. This education method comes from a horse-centred perspective. During the years of its development, training materials were developed to make it easy for human and horse to communicate. It has been proven that horses memorize bad experiences faster than good ones. Therefore, it is better to “get it right first time” and use training materials that can be relied upon. At the Andrea Kutsch Academy you learn how the AKA powered by Stübben material helps you set the right impulses.

AKA Long lines

The AKA long lines can be used for different lunging techniques. They can also be used for ground work. Their ends are reinforced.

AKA Surcingle

The AKA Surcingle stands out by its large D-rings. These allow the attachment of various training equipment.

AKA Chest strap

The AKA chest strap prevents the saddle or the surcingle from slipping. It can also be helpful for sensitive horses, to allow the girth to be tightened very smoothly.

AKA Connecting strap

The AKA Connecting strap connects the stirrups under the horse's belly so they can be used like sliding rails for long lines.

AKA Starter bridle

The AKA Starter Bridle is kept simple to allow youngsters freedom of movement with the bit.

STEELTEC

Bucephalus Pro Horse bit

The "Bucephalus pro horse bit" is a soft action loose ring snaffle bit. The reins are attached to the bit with two strong rubber bands within the O-rings. This creates a flexible connection between the rider's hand to the horse's mouth thus encouraging the connection from the hind leg into the rein. The pressure transmitted through the horse's mouth is reduced thereby promoting forward motion, rhythm and a softer contact. This naturally encourages elasticity in the horse's movement and willingness in the collection.

2122 Bucephalus Pro Horse bit

cm	Inch	Thickness	Ring ø
11,5	4 1/2"	16 mm	65 mm
12,5	5"	16 mm	70 mm
